SERVICE BULLETIN

Effective Serial Number: All Units - Chance Rides, Inc.

Ride: WIPEOUT

Subject: Boom Limit Switch

Chance Rides, Inc. has received reports of at least one WIPEOUT amusement ride which was operated with the boom limit switch being by-passed. This could allow the lap bars to be unlocked during operation of the ride, resulting in possible injury to passengers.

NEVER OPERATE THE RIDE WITH THE BOOM LIMIT SWITCH BY-PASSED OR TIED DOWN.

The boom limit switch is a safety item located on the boom support stand of the turret. This switch locks out the lap bar switch, located on seat number 1, so that the lap bars cannot be unlocked while the ride is up in the air.

All maintenance personnel and operators must be instructed as to the importance of this switch. This switch must be properly adjusted at all times during operation.
