Bulletin No:	FRB24-N001
Release Date:	7/8/2025
Effective Date:	7/8/2025
Supersedes:	None
Completion Date:	See text
Page:	1 of 1

NOTIFICATION

Ride Mfg:	KMG International BV	Affected Production Dates:	All
Ride Name:	Frisbee 24 or Afterburner	Affected Serial Numbers:	1 through 45
Model Number:	FRB24		

Abstract of Issue: Changed minimum patron height requirement

Reason for release:

KMG invests substantial time and effort to design and build rides according to the latest standards to ensure that our rides can be used safely and reliably over a long life span of operation.

To aid in reaching this goal KMG has recently performed an updated ergonomic test on its gondola and restraint systems. As an outcome of the test, KMG determined that the required height of patrons had to be increased to **1.40m (55.12 inches)** for the Frisbee 24 or Afterburner ride with serial numbers 1 through 45.

The patron height requirement of **1.40m (55.12 inches)** mentioned in this bulletin supersedes the height requirement mentioned in the user manual / ride information plate originally delivered with the amusement ride and also supersedes user manuals issued after delivery, but earlier than 7/8/2025.

Action to be taken:

All owners and operators of Frisbee 24 or Afterburner rides shall immediately update their internal and external documentation and policies in regards to the minimum height requirements for the Frisbee 24 or Afterburner amusement ride. This includes postings and signs at and around the ride, data used in publications and protocols/instructions for operators and other personnel at the ride.

The minimum height requirement listed on the ride information plate shall be updated to **1.40m (55.12 inches)** using and overlay label or equal measure.
