|----------------------|---------------------------------|-----|

**Abstract of Issue:**

The restraints require air pressure to maintain the locked position. Currently, the control system does not shut the ride down on loss of air pressure.

**Reason For Release:**

Because the control system does not shut the ride down on loss of air pressure, passenger restraints could open inadvertently.

**Action To Be Taken: (Inspection, Modification, Replacement, NDT, Order Parts, Manual Revision, Procedural Change, etc.)**

Chance has issued a procedure on how to install the Air Pressure Interlock System. The equipment kit is available from Chance.

**Detail Of Issue: (Text/Drawings/Schematics)**

All parks with the Wipeout Ride shall purchase the Air Pressure Interlock System kit, Chance Kit number K402R1261-0, and install the kit per the attached Chance Instructions.

Reference the attached Chance Instructions (4 pages) for the kit description in pdf format.

Once the kit is installed, the ride should stop running upon loss of air pressure below 31 psi.
